### 1) Settings-Bluetooth

### 2) Select MT18 and MT18\_Audio

### 3)Click forget this device

## ■ FAQ

### 1. Why can't you wear watch to take a hot bath?

The temperature of the bath water is relatively high, will produce a lot of water vapor, which has a small molecular radius. It's easy to infiltrate from the annulus shell gap, when the temperature will fall down and then condense into liquid droplets, easy to cause the loop internal circuit short circuit, damage the watch.

### 2. Why can't receive a message push?

Android phone Settings:

1. Confirm the message push switch is turned on in the mobile phone.
2. All confirmation messages can be displayed normally in the mobile notification banner. The watch message is only pushed by reading the notification banner: if there is no message in the mobile notification banner, the watch will not be able to receive the push. (you need to find the notification setting in the mobile phone Settings, and turn on the notification switch of Whatsapp, facebook, phone, SMS etc.)

ios phone settings:

1. Confirm the message push switch is turned on in the mobile phone.
2. The confirmation message is that the notification banner can be displayed normally. (you need to find the notification setting in the mobile phone settings and turn on the notification switch of Whatsapp, facebook, Phone, SMS etc.)

## ■ Why does the bracelet often disconnect?

Hello, this situation may be caused by the blocking or cleaning of the software by the mobile phone system, which causes the software to not run normally. Please set the mobile phone according to different mobile phone brands. Set the APP lock on the Android phone, as shown in the figure:
